Chapter 1

Root issue HBASE-22401

1.1 Summary

Document which branches are 'live' in the ref guide

1.2 Description

As a committer it is hard to keep up with all of the branches that are active. This JIRA is to add a definitive list of active branches to the contributing/committer section of the ref guide so committers know where bug fixes should be pushed.

1.3 Attachments

No attachments

1.4 Comments

1. **zyork:** In addition we could delete the branch-x branch when that release line is EOL (we can always take the last release on that line and add any additional commits if we want to revive a branch for one last release).
2. **busbey:** I've previously tried to push branch deletion and met significant resistance, just fyi
3. **busbey:** It'd be good for this to land in the committer guide for reviewing contributions. And roll in the existing section on RMs.

I think our current listing of active branches is effectively the RM list. And maybe the header on the dist.a.o listing.
